

Ex. No. 1	Design A Website Using HTML5
Date of Exercise	14.7.26
GitHub Host Link	https://github.com/NateshNaren/AnimeVerse

Aim

To design and develop a simple yet structured Anime Fan Website using HTML5 by implementing semantic elements, headings, paragraphs, images, tables, lists, hyperlinks, comments, and basic CSS formatting to create an attractive and user-friendly webpage.

Description

This exercise is implemented using **HTML5** and **internal CSS** to design a simple **Anime Fan Site** webpage. The following technical concepts are used:

<!DOCTYPE html> Declares the document as an HTML5 document.

<html> Root element that contains the entire webpage.

<head> Contains the title and style information of the webpage.

<title> Displays the webpage title in the browser tab.

<style> Applies CSS styles to the webpage.

<body> Contains all the visible content of the webpage.

<div> Divides the webpage into different sections.

<h1> Displays the main heading of the webpage.

<h2> Displays section headings.

<p> Displays paragraphs of text.

**** Displays an image on the webpage.

<table> Displays information in rows and columns.

<tr> Creates rows in the table.

<th> Displays table headings.

<td> Displays table data.

**** Creates an unordered (bulleted) list.

**** Creates an ordered (numbered) list.

**** Represents items in a list.

<dl> Creates a description list.

<dt> Defines a term in the description list.

<dd> Gives the description of the term.

<a> Creates hyperlinks to other pages or sections.

background-color Sets the background color of the webpage.

color Changes the text color.

font-family Changes the font style of the text.

border Adds borders to the table.

border-collapse Combines table borders into a single border.

padding Adds space inside table cells.

width Sets the width of the image.

<hr> Inserts a horizontal line to separate sections.

Procedure:

1. Open Visual Studio Code or any text editor.
2. Create a new folder named AnimeVerse.
3. Inside the folder, create a new file named index.html.
4. Save Anime images in a sub-folder
5. Begin the HTML document with the `<!DOCTYPE html>` declaration.
6. Add the required HTML5 tags such as `<html>`, `<head>`, `<meta>`, `<title>`, and `<body>`.
7. Create different sections using `<div>` elements.
8. Insert the main heading using `<h1>` and subheadings using `<h2>`.
9. Add paragraphs describing the Anime Fan Site using `<p>` tags.
10. Insert a Anime image using the `<img>` tag.
11. Create an ordered list, unordered list, and description list to display services and features.
12. Create a table to display Anime name, genre and rating.
13. Add different hyperlinks including external, internal, bookmark, email, phone, and clickable image links.
14. Insert HTML comments before each section for better code readability.
15. Apply background color and text color using internal CSS.
16. Save the file.
17. Open the file in a web browser or Live Server to view the output.
18. Verify that all required HTML elements are displayed correctly.

Program

```
<!DOCTYPE html>

<html lang="en">

<head>

  <meta charset="UTF-8">

  <meta name="viewport" content="width=device-width, initial-scale=1.0">

  <title>AnimeVerse | Anime Fan Site</title>

  <style>

    body {

      background-color: #12181b;

      color: #e8e8e8;

      font-family: Arial, sans-serif;

      margin: 20px;

      line-height: 1.6;

    }

    h1 {

      text-align: center;

      color: #ff8c42;

      letter-spacing: 2px;

    }

    p.tagline {

      text-align: center;

      color: #cfcfcf;

    }

  </style>

</head>

Output

Result

The HTML5 Anime Fan Site webpage was successfully designed and executed using HTML5 tags and basic CSS. The output was verified successfully.
